SUBJECT <i>Status of Permit</i>			
SUMMARY <i>A draft was issued this spring before the changes to Preheat system was installed. Since then they have been able to reuse their water into the stack and have gone to discharge. I Sunny felt that maintaining no discharge may be difficult in the winter months due to Evaporation from these Boilers. I didn't want to issue a zero discharge permit so the draft will stand for now. Sunny & Dave had not seen the draft, it was addressed to Mr. Craig G.M.</i>			
Action Required <i>Review the draft make applicable changes to self monitoring OR issue draft zero permit</i>			
Action Taken			

USEPA SF
